

## CORI v3 National Endoscopic Database

The data in the National Endoscopic Database (NED) is captured as part of the documentation of endoscopic procedures. This document describes the structure and data in the CORI v3 NED, i.e. data captured by documentation using the CORI v3 Endoscopic Reporting Software. Please see associated documents for a broader view of this database (Key Points about the National Endoscopic Database, and Overview of the National Endoscopic Database)

The main procedure data table is the PROC2KA\_MERGE table.

- The PROC2KA\_MERGE table contains a unique procedure identifier (PROC column) for every procedure in the warehouse. This identifier links procedure data in the PROC2KA\_MERGE table to all other data in the warehouse for a given procedure; in all other data tables, the PROC column functions as a foreign key to PROC2KA\_MERGE.
- The PROC2KA\_MERGE table also contains patient demographic information, site information, and a unique physician identifier associated with each procedure. The individual columns of the PROC2KA\_MERGE table are described in more detail in the Appendix 1, the PROC2KA\_MERGE Dictionary.
- The PROC2KA\_MERGE table also identifies the procedure type (PROCTYPE column). The procedure type is critical to linking the PROC2KA\_MERGE procedure data to the correct data tables when looking for detailed procedure data. Most other procedure data tables are named with a three letter prefix indicating the procedure type.
- Each of these prefixed procedure data tables has a PROC column that contains the unique procedure identifier. Some tables may have more than one row per procedure. For instance, if multiple polyps are found during a Colonoscopy, there will be multiple rows in the COL\_POLYP\_65 table for that given procedure identifier (PROC).
- In such cases there is usually a DETAIL column. This column is essentially a sequence number which can be used to construct a composite key (the PROC and DETAIL columns taken together) for that table. The numeric value in the DETAIL column has no meaning with regard to the procedure data.

The procedure types in the PROCTYPE column of PROC2KA\_MERGE are:

COL – Colonoscopy

EGD – Esophagogastroduodenoscopy, EGD

BRO – Bronchoscopy  
CAP - Capsule Endoscopy  
ERC - Endoscopic retrograde cholangiopancreatography ERCP  
EUS - Endoscopic ultrasound EUS  
MOT - Motility study  
NON – Non-endoscopic procedure  
SIG – Flexible Sigmoidoscopy

As an example of the naming conventions used in the CORI v3 NED, all tables containing Colonoscopy data have names starting with COL.

COL\_INDS is a table containing the Indication data for Colonoscopies

COL\_FINDS is a table containing the Findings data for Colonoscopies

Similarly,

EGD\_INDS is table containing the Indication data for Esophagogastroduodenoscopies

EGD\_FINDS is table containing the Findings data for Esophagogastroduodenoscopies

#### Physician Demographic Data

While patient demographic data is present within the PROC2KA\_MERGE table itself, the Physician demographic data is stored in the PHYSICIAN table. The PHYSICIAN column in the PROC2KA\_MERGE table contains a unique physician identifier which is linked to the PHYSICIAN column in the PHYSICIAN table. The columns in the PHYSICIAN table are described in more detail in the accompanying PHYSICIAN Dictionary (Appendix 2).

#### Parent-Child Tables

There are many tables in the Cori v3 National Endoscopic Database that are "parent" tables to one or more "child" tables. In these cases there will be one or more columns in the parent table with name that is identical (or similar to) the child table name, except that the child table name is prefixed with the procedure type.

Example: COL\_FINDS (a parent table) has column POLYP\_65. The related child table is COL\_POLYP\_65.

There are two cases where the Child table names do not follow this pattern.

1. Table names may not exceed 24 characters in the NED, so in some cases the parent column name is truncated in creating the child table name.

Example: COL\_FINDS (Parent table) has a column MUCOSALABNORMALITYCOLITI\_1137. The related Child table is COL\_MUCOSALABNORMALITYCO.

2. In other cases, the child data represents data collected in a grid on the user interface. In these cases the columns in the Parent table will be suffixed with *\_GD* but this suffix will not be present in the child table name.

Example: COL\_PATHOLOGY (Parent table) has column named BIOPSYDESCRIPTION\_97\_GD. The related Child table is COL\_BIOPSYDESCRIPTION\_97.

In most of the linked parent-child tables, the column in the parent table will have either '1' or NULL value.

- '1' indicates that data is present in the child table for that procedure. The child table will have one or more rows of data for each procedure that has a '1' in the Parent table.
- NULL value in the column in the Parent table indicates that there is no associated data present in the Child table.

Rows in the child table contain the procedure id (PROC) that relates them to the correct procedure. In addition, child tables also have DETAIL field. The DETAIL field functions as sequence number to distinguish rows for the same procedure. The combination of the values of PROC and DETAIL provide a unique identifier for each row (i.e. act as composite key).

Example: COL\_FINDS (Parent table) has a '1' in column POLYP\_65 for procedure PROC= 153000043152

- In the Child table COL\_POLYP\_65, there are 6 rows of data for this procedure number. Each row has a different value for DETAIL, and each gives data for a different polyp found during the procedure, including polyp location, size, whether the polyp was removed, retrieved, method of removal, etc.

Example: COL\_FINDS (Parent table) has a NULL value in column POLYP\_65 for procedure PROC= 155000018403

- In the Child table COL\_POLYP\_65, there are no rows of data for this procedure number, indicating that no polyps were found.

complete list of Parent-Child table relationships is in Appendix 3 (Parent Child Tables).

### CORI v3 Screenshots and Table names

Screenshots from the CORI v3 Endoscopic Reporting Software have been provided by procedure type in the following documents:

<i>Document</i>	<i>Procedure Type</i>
CORI3_BRO_Screenshots.pdf	Bronchoscopy
CORI3_CAP_Screenshots.pdf	Capsule Endoscopy
CORI3_COL_Screenshots.pdf	Colonoscopy
CORI3_EGD_Screenshots.pdf	EGD
CORI3_ERC_Screenshots.pdf	ERCP
CORI3_EUS_Screenshots.pdf	EUS
CORI3_MOT_Screenshots.pdf	Motility
CORI3_NON_Screenshots.pdf	Non-endoscopic procedures
CORI3_SIG_Screenshots.pdf	Flexible Sigmoidoscopy

The main screens for each procedure type are the tabs along the left side of any procedure screen. For example, the main screens for Colonoscopy and tables for data found on those screens are:

<i>Screenshot Tab</i>	<i>Data table</i>
Proc Info	COL_PROCINFO
Indications	COL_INDS
Exam Info	COL_EXAMINFO
Findings/Therapy	COL_FINDS
Intervent/Events	COL_COMPLICATIONS
Assess/Diag	COL_ASSESSMENT
Treatment Plan	COL_TREATMENTPLAN
Scheduling	Not available in the NED (except grid data)
Post Exam	COL_PATHOLOGY
F/up Info/Events	COL_FUPINFO

In addition to these main procedure tables, there are at least two other types of tables derived from procedure data:

- The data from each grid is stored in its own table, which is a child table, usually but not always to one of the main tables listed above

Example: The COL Proc. Info. screen shows a grid for Procedure Personnel. That grid data will be found in the COL\_Title\_95 table. The screenshot documents give the name of each main table as well as the name of the grid tables.

- Details about Findings and Therapies are found in tables, one for each Finding or Therapy. The main Findings table (e.g. COL\_Finds) will contain one column for each Finding, which are parent columns to the detail tables. For some procedure types, there is also a column in the main Findings table for each Therapy.

Example: the COL\_Finds table contains a column Polyp\_65. A value of '1' in this column indicates that there is detail data found in the table COL\_Polyp\_65.

Example: Data about the therapy Dilation, performed during a colonoscopy, will be found in the table COL\_Dilation\_241. Unlike findings, there is no parent table for therapies in COL procedure type.

### Data deletions

Text data has been "scrubbed" to remove protected health information, including patient or doctor names, full dates, and other personal identifiers. In these cases the deleted string has been replaced with an indication that data has been deleted, such as *[deleted]*, *[date deleted]*, *[redacted comment]*, or *[name deleted]*. Occasionally free-text columns (e.g. Comments fields) have been removed entirely.

### The data dictionary

A data dictionary is provided as an Excel spreadsheet. For each column in the CORI v3 NED, there is one row in the spreadsheet. Fields include:

- the dataset (table) name (DataSet)
- the variable (column) name (Variable)
- the SAS datatype (Type)
- the SAS field length (Len)
- the SQL database datatype (SQLdatatype)
- the main screen for capture of this data (Screen)
- the label on that screen, i.e. what the user saw when documenting on the screen (Label)
- the type of screen control for capturing the data -- textbox, numeric field, option group, checkbox, menu, editable menu, etc. (ControlType)
- the possible values for the variable (Format). Consider the following, however:
  - Many of the menus used in CORI v3 are editable menus, i.e. while a list of suggested values is presented to the user, the user may enter any value into the field.
  - It is not possible to know what the suggested value list was at the time of the procedure, so values listed in this field are probable but not absolute.
  - The data dictionary tries to distinguish between menus (i.e. which are not editable) and editable menus, but the distinction is not always clear. Examination of the values found in the field will be necessary in order to determine the possible values.
- The name of the screenshot document illustrating the CORI v3 screens (Screenshot)
- The page in the screenshot document illustrating the variable, when available (Page)
  - Some of the screens changed over time; alternate screenshots are shown when available, however, dates of changes in the screens are not documented
- Notes about the variable that may help during data analysis (Notes)

#### Data Missing from the CORI v3 National Endoscopic Database

The screenshots show some data controls that were used for procedure documentation but which do not have corresponding tables or columns in the National Endoscopic Database. Appendix 4 lists the types of data by procedure which are not found in the NED data.

Appendix 1: PROC2KA\_MERGE Dictionary

TABLE NAME	COLUMN NAME	COLUMN DESCRIPTION
PROC2KA_MERGE	PROC	Unique identifier for procedures. Foreign key in all procedure related tables
PROC2KA_MERGE	SITE	Unique identifier for sites using CORI EHR software to document GI procedures
PROC2KA_MERGE	AUTHOR	Unique identifier for clinical personnel responsible for creation of the procedure record
PROC2KA_MERGE	PROCTYPE	Type of Procedure: COL-Colonoscopy; EGD-Esophagogastroduodenoscopy; BRO-Bronchoscopy; CAP-Capsule Endoscopy; ERC-Endoscopic retrograde cholangiopancreatography; EUS-Endoscopic ultrasound; MOT-Motility study; NON-Nonendoscopic procedure; SIG-Sigmoidoscopy
PROC2KA_MERGE	DUPLICATE	Cori3 Interface quality check. Multiple procedures occurring on the same day must be confirmed as legitimate by the user. This field contains operational data and should not be used in analysis.
PROC2KA_MERGE	REGION	The general region of the country where site is located
PROC2KA_MERGE	SITETYPE	Type of clinical site where procedure was performed: University, Community, HMO, Military, VA
PROC2KA_MERGE	ID	Unique identifier for patient
PROC2KA_MERGE	RACE	Patient race: White, Black, Asian, Nat(ive) American, Pacific Is(lander), Multi-Racial, Not Given
PROC2KA_MERGE	GENDER	0=Female, 1=Male
PROC2KA_MERGE	AGE	Patient age at time of procedure
PROC2KA_MERGE	PROC_ORDER	Order of procedures for a patient within a given year. If multiple procedures occurred on the same date, the order number will be the same for those procedures.
PROC2KA_MERGE	PROCYEAR	Year in which procedure was performed
PROC2KA_MERGE	PHYSICIAN	Unique identifier for responsible endoscopist
PROC2KA_MERGE	FELLOW	Unique identifier for fellow, if procedure is performed by a fellow
PROC2KA_MERGE	INOUT	IN-Inpatient procedure; OUT-Outpatient procedure; UNK-Unknown
PROC2KA_MERGE	GROUPID	Groupid indicates associated sites that share a CORI installation/database. Sites are associated with only one groupid, but one groupid may be associated with multiple sites. Physicians may also be associated with multiple sites within a single groupid.
PROC2KA_MERGE	STATE	State where procedure was performed
PROC2KA_MERGE	ETHNICITY	Hispanic, Not Hispanic, Unknown
PROC2KA_MERGE	RACE_NIH	NIH race designation for the patient: Asian/Pacific Is, Hispanic, Native American, Non Hispanic Black, Non Hispanic White, Other, Unknown

PROC2KA_MERGE	PATH_CATEGORY	Pathology status: path requested, report only, results and report, results only
PROC2KA_MERGE	PEDS	Pediatric procedure: T=True, F=False
PROC2KA_MERGE	START_DATE	Date site began participating in Cori3 data submissions
PROC2KA_MERGE	END_DATE	Date site ceased participating in Cori3 data submissions
PROC2KA_MERGE	FACILITY_TYPE	Type of Facility where procedure was performed: Ambulatory Center, Hospital, Office

Appendix 2: PHYSICIAN Dictionary

TABLE NAME	COLUMN NAME	COLUMN DESCRIPTION
PHYSICIAN	PHYSICIAN	Unique identifier for responsible endoscopist
PHYSICIAN	DEGREE	Medical degree of responsible endoscopist
PHYSICIAN	GENDER	M=Male, F=Female
PHYSICIAN	MEDSCHOOL	Medical school attended by responsible endoscopist
PHYSICIAN	YEAR_GRADUATED	Year the physician graduated from medical school
PHYSICIAN	FELLOWSHIP_COMPLETED	0=Physician has not completed fellowship; 1=Physician completed a fellowship, NULL=unknown
PHYSICIAN	SPECIALTY	Physician specialty
PHYSICIAN	CERT_NONE	1=Physician has no certifications
PHYSICIAN	CERT_GI	1=Physician has certifications in Gastroenterology
PHYSICIAN	CERT_GI_YEAR	Year the physician received certification in Gastroenterology (if available)
PHYSICIAN	CERT_SURG	1=Physician has certifications in Surgery
PHYSICIAN	CERT_SURG_YEAR	Year the physician received certification in Surgery (if available)
PHYSICIAN	CERT_FAM_MED	1=Physician has certifications in Family Medicine
PHYSICIAN	CERT_FAM_MED_YEAR	Year the physician received certification in Family Medicine (if available)
PHYSICIAN	CERT_INT_MED	1=Physician has certifications in Internal Medicine
PHYSICIAN	CERT_INT_MED_YEAR	Year the physician received certification in Internal Medicine (if available)
PHYSICIAN	CERT_PULM	1=Physician has certifications in Pulmonary Medicine
PHYSICIAN	CERT_PULM_YEAR	Year the physician received certification in Pulmonary Medicine (if available)
PHYSICIAN	CERT_PED_GI	1=Physician has certifications in GI pediatrics
PHYSICIAN	CERT_PED_GI_YEAR	Year the physician received certification in GI Pediatrics (if available)
PHYSICIAN	CERT_COLRECSURG	1=Physician has certifications in Colorectal Surgery
PHYSICIAN	CERT_COLRECSURG_YEAR	Year the physician received certification in Colorectal Surgery (if available)
PHYSICIAN	CERT_PED	1=Physician has certifications in Pediatrics
PHYSICIAN	CERT_PED_YEAR	Year the physician received certification in Pediatrics (if available)
PHYSICIAN	CERT_OTHER1	Title of other certification held by physician
PHYSICIAN	CERT_OTHER1_YEAR	Year of other certification held by physician
PHYSICIAN	CERT_OTHER2	Title of other certification (#2) held by physician
PHYSICIAN	CERT_OTHER2_YEAR	Year of other certification (#2) held by physician
PHYSICIAN	CertificationStatus	Indicates reliability of YEAR_GRADUATED and CERT_XX_YEAR fields. Resolved = validated in 2014, Not resolved = could not be validated in 2014, Not reviewed = not reviewed for validity

PHYSICIAN	DuplicateStatus	one record per physician; previously more than one record per physician, resolved to 1 row in this data set; 3 = unable to resolve duplicate rows for this physician; 5 = unable to validate duplicate status
-----------	-----------------	---

## Appendix 4: Missing Data

The following screens from the CORI v3 Endoscopic Reporting Software collect data which is NOT available in the National Endoscopic Database.

### **CAP**

History screen data is missing EXCEPT

- Current Medications grid (found in CAP\_Type\_4129 table) and
- Past Medical/Surgical History grid (found in CAP\_System\_4133 table)

Physical Examination / Labs screen data is missing EXCEPT

- Results of Prior Studies grid (found in CAP\_TypeOfStudy\_4144 table)

UGI Findings and Therapy Detail data is missing (i.e. no child tables for the columns in the CAP\_UGI\_Finds table)

Small Bowel Findings and Therapy Detail data is missing (i.e. no child tables for the columns in the CAP\_SMB\_Finds table)

Colon Findings and Therapy Detail data is missing (i.e. no child tables for the columns in the CAP\_COL\_Finds table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in CAP\_Activity\_4351 table)

Followup Information / Events data is missing EXCEPT

- Post Exam Events grid (found in CAP\_EventType\_4448 table)

### **BRO**

History screen data is missing EXCEPT

- Current Medications grid (found in BRO\_Type\_670 table) and
- Past Medical/Surgical History grid (found in BRO\_System\_352 table)

Physical Examination / Labs screen data is missing EXCEPT

- Results of Prior Studies grid (found in BRO\_TypeOfStudy\_426 table)

Visualization screen data is missing

Stent grid data is missing from the screen Therapy: Stent (found in BRO\_Stent\_1083 table)

Staging screen data is missing EXCEPT

- N-Staging grid (found in BRO\_PrimarySite\_1024 table) and
- T-Staging grid (found in BRO\_Structure\_1020 table)

Assessment /Diagnosis screen data is missing EXCEPT

- Diagnoses grid (found in BRO\_Category\_1125 table )

Treatment Plan screen data is missing EXCEPT

- Medication Plan grid (found in BRO\_MedType\_1165 table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in BRO\_Activity\_1182 table)

Post Examination screen data is missing EXCEPT

- Follow-up Results grid (found in BRO\_Action\_1199 table) and

- Pathology grid (found in BRO\_BiopsyDescription\_11 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in BRO\_EventType\_120 table)

## **COL**

Dilator grid data is missing from the screen Therapy: Dilation (found in COL\_Dilation\_241 table)

Procedure (Proc) grid data is missing from the screen Therapy: Stent (found in COL\_Stent\_268 table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in COL\_Activity\_98 table)

## **EGD**

Liver Disease: Calculate Child's-Pugh Score screen data is missing

Dilator grid data is missing from the screen Therapy: Dilation (found in EGD\_Dilation\_18 table)

Stent grid data is missing from the screen Therapy: Stent Placement/Replacement (found in EGD\_StentPlacementReplac table)

Instrument grid data is missing from the screen Therapy: Stent Removal (found in EGD\_StentRemoval table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in EGD\_Activity\_330 table)

## **ERCP**

History screen data is missing EXCEPT

- Current Medications grid (found in ERC\_Type\_2864 table) and
- Past Medical/Surgical History grid (found in ERC\_System\_231 table)

ERCP EGD Findings and Therapy Detail data is missing (i.e. no child tables for the columns in the ERC\_EGDFinds table)

ERCP ERCP Findings and Therapy Detail data is missing (i.e. no child tables for the columns in the ERC\_ERCPFinds table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in ERC\_Activity\_333 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in ERC\_EventType\_112 table)

## **EUS**

History screen data is missing EXCEPT

- Current Medications grid (found in EUS\_Type\_2865 table) and
- Past Medical/Surgical History grid (found in EUS\_System\_344 table)

EUS EGD Findings and Therapy Detail screen data (i.e. no child tables for the columns in the EUS\_EGDFinds table)

EUS Biliary/Pancreatic Findings and Therapy Detail screen data (i.e. no child tables for the columns in the EUS\_ColonFinds table) (Note: the main table was named improperly and this data is found in EUS\_ColonFinds table and not in the EUS\_BilPanFinds table)

EUS Colonoscopy Findings and Therapy Detail data (i.e. no child tables for the columns in the EUS\_BilPanFinds table) (Note: the main table was named improperly and this data is found in the EUS\_BilPanFinds table, not in the EUS\_ColonFinds table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid found in EUS\_Activity\_1813 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in EUS\_Event\_Type\_114 table)

## **MOT**

History screen data is missing EXCEPT

- Current Medications grid (found in MOT\_Type\_2866 table) and
- Past Medical/Surgical History grid (found in MOT\_System\_347 table)

Physical Examination / Labs screen data is missing EXCEPT

- Results of Prior Studies grid (found in MOT\_TypeOfStudy\_417 table)

Assessment / Diagnosis screen data is missing EXCEPT

- Diagnoses Grid (found in MOT\_Category\_3925 table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in MOT\_Activity\_2236 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in MOT\_EventType\_116 table)

## **NON**

History screen data is missing EXCEPT

- CurrentMediations grid (found in NON\_Type\_2867 table) and
- Past Medical /Surgical History grid (found in NON\_System\_350 table)

Physical Examination / Labs screen data is missing EXCEPT

- Results of Prior Studies grid (found in NON\_TypeOfStudy\_425 table)

Percutaneous Liver Biopsy Detail data is missing from Procedure Information: Percutaneous Liver Biopsy Detail: with Multiple Biopsies (>10) (found in NON\_ProcInfo table, withMultipleBiopsies\_19277 column)

Anoscopy Detail data is missing from Procedure Information: Anoscopy: Anoscopy Detail: with Multiple Biopsies (>10) (found in NON\_ProcInfo table, withMultipleBiopsies\_19278 column)

Liver Disease: Calculate Child's-Pugh Score screen data is missing

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in NON\_Activity\_2620 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in NON\_EventType\_118 table)

## **SIG**

History screen data is missing EXCEPT

- Current Medications grid (found in SIG\_Type\_2863 table) and
- Past Medical/Surgical History grid (found in SIG\_System\_224 table)

Physical Examination / Labs screen data is missing EXCEPT

- Results of Prior Studies grid (found in SIG\_TypeOfStudy\_413 table)

Dilator grid data is missing from the screen Therapy: Dilation (found in SIG\_Dilation\_205 table)

Procedure (Proc) grid data is missing from the screen Therapy: Stent (found in SIG\_Stent\_316 table)

Scheduling screen data is missing EXCEPT

- Scheduling and Referral grid (found in SIG\_Activity\_1516 table)

Post Examination screen data is missing EXCEPT

- Follow-up Results grid (found in SIG\_Action\_124 table) and
- Pathology grid (found in SIG\_BiopsyDescription\_15 table)

Followup Information / Events screen data is missing EXCEPT

- Post Exam Events grid (found in SIG\_EventType\_109 table)
