

OGTT Scheduling Script

Hi, this is _____ from the DAISY study. I am calling to schedule _____ for their next DAISY OGTT clinic appointment.

The OGTT is done here at the Barbara Davis Center in our Infusion Center and will take about 3 – 3 ½ hours.

During the OGTT, you/your child will drink a very sweet drink and then blood will be taken every 30 minutes. An IV line will be placed at the start and all the samples will be taken from this. Having the IV makes it very easy to draw the samples. You/they are able to watch a movie or do quiet activities until the test is done.

Again, the whole OGTT takes between 3 to 3 ½ hours. These can be scheduled Monday, Tuesday, or Friday mornings.

If they want more information, transfer them to the DAISY Study nurse or take the name and best number and the DAISY Study nurse will call them back.
