

To the parents

06-06-2012

Dear Parents,

The results of the DAISY antibody tests for JOHN, drawn on 5/9/2012, are as follows:

GAA: 25	Positive	(GAD Autoantibody)
IAA -0.001	Negative	(Insulin Autoantibody)
IA-2: 0	Negative	(IA-2)
ZnT8: 0.002	Negative	(ZnT8 Autoantibody)

This is a screening test to determine if antibodies to the pancreas are present. It is important to realize that even though your child continues to be positive for one antibody, it does not mean your child will definitely develop diabetes. Only 1 out of 4 children positive on this screening test will develop diabetes by the age of 20.

We would like to continue to follow your child more closely, and recommend repeating this test every three to six months. We will be contacting you one month before GRACE is due for his/her next clinic visit to schedule this appointment. If you have any questions please feel free to contact our study nurse, Michelle Hoffman, at (303) 724-7555.

Thank you very much for participating in this diabetes research.

Sincerely,

Marian Rewers, MD, PhD

Georgeanna Klingensmith, MD

Jill M. Norris, PhD
