

To the parents

06-06-2012

Dear Parents,

The results of the DAISY antibody tests for JANE, drawn on 5/9/2012, are as follows:

GAA: 0	Negative	(GAD Autoantibody)
IAA -0.001	Negative	(Insulin Autoantibody)
IA-2: 6	Positive	(IA-2 Autoantibody)
ZnT8: 0.002	Negative	(ZnT8 Autoantibody)

This is a screening test to determine if antibodies to the pancreas are present. It is important to realize that even though one antibody test is positive, it does not mean your child will definitely develop diabetes. Only 1 out of 4 children positive on this screening test will develop diabetes by the age of 20.

We would like to follow your child more closely, and recommend repeating these tests as soon as possible.

Our study nurse, Michelle Hoffman, will be calling you to answer any questions you may have and to schedule your next appointment. If she has not contacted you yet, feel free to call her at (303) 724-7555.

Thank you very much for participating in this diabetes research.

Sincerely,

Marian Rewers, MD, PhD
