

To the parents

date

Dear Parents,

The results of the DAISY Autoantibody tests for name, drawn on date, are as follows:

GAA: 35	Positive	(GAD Autoantibody)
IAA: -0.001	Negative	(Insulin Autoantibody)
IA-2: 5	Positive	(IA-2)
ZnT8: 0.002	Negative	(ZnT8 Autoantibody)

This is a screening test to determine if Autoantibodies to the pancreas are present. Your child was found to be positive for two or more diabetes Autoantibodies. Being positive for multiple Autoantibodies means your child's risk has significantly increased. The risk is 70 in 100, that your child could develop type 1 diabetes during their lifetime. It is important to follow your child closely; therefore, we recommend repeating these tests every 3 months to monitor these Autoantibodies and to test your child's blood sugar.

Because your child is at a higher risk, it is important for you to be aware of the early symptoms of diabetes, which are:

Increased thirst	Change in appetite
Increased urination	Bed wetting in a previously dry child
Nausea	Yeast infections
Vomiting (without diarrhea)	Decreased energy

If your child has two or more of the above symptoms please call our study nurse, Michelle Hoffman at 303-724-7555, the DAISY Study at 303-724-7622, or your child's physician.

We will be contacting you one month before name is due for his/her next clinic visit to schedule this appointment. If you have any questions please feel free to contact Michelle at the phone number listed above.

Thank you very much for participating in this diabetes research.

Sincerely,

Marian Rewers, MD, PhD
Principal Investigator
