

To namedateDear name,The results of the DAISY Autoantibody tests for name, drawn on date, are as follows:

GAA: 35	Positive	(GAD Autoantibody)
IAA: -0.001	Negative	(Insulin Autoantibody)
IA-2: 5	Positive	(IA-2)
ZnT8: 0.002	Negative	(ZnT8 Autoantibody)

This is a screening test to determine if Autoantibodies to the pancreas are present. You were found to be positive for two or more diabetes Autoantibodies. Being positive for multiple Autoantibodies means your risk for developing type 1 diabetes has significantly increased. The risk is 70 in 100 that you could develop type 1 diabetes during your lifetime. It is important to follow you closely; therefore we recommend repeating these tests every 3 months to monitor these Autoantibodies and to test your blood sugar.

Because you are at a higher risk, it is important for you to be aware of the early symptoms of diabetes, which are:

Increased thirst	Weight loss	Vision changes
Increased urination	Nausea	Change in appetite
Vomiting (without diarrhea)	Decreased energy	Yeast infections

If you have two or more of the above symptoms please call our study nurse, Michelle Hoffman at 303-724-7555, the DAISY Study at 303-724-7622 or your physician.

We will be contacting you one month before you are due for your next clinic visit to schedule this appointment. If you have any questions please feel free to contact Michelle at the phone number listed above.

Thank you very much for participating in this diabetes research.

Sincerely,

Marian Rewers, MD, PhD

Principal Investigator
