

## Diabetes Prevention Program (DPP) Study Data Archive

The Diabetes Prevention Program (DPP) was a randomized clinical trial with the focus on determining which interventions could help in the prevention or delay of type 2 diabetes. The ancillary data release includes measurements conducted on specimens collected during the course of the main DPP study that identified and evaluated the relationships between steroid sex hormones, sex hormone binding globulin (SHGB), SHGB single-nucleotide polymorphisms (SNPs), and diabetes risk factors to determine how these relationships impact the progression to diabetes within DPP. Additional ancillary data on trends and rate of change of plasma PFAS (per- and polyfluoroalkyl substances) concentrations in overweight or obese adults is also included in the data package.

Archive files are organized into the following directories:
