

## **Diabetes Prevention Program Outcomes Study (DPPOS) Data Archive**

The Diabetes Prevention Program (DPP) was a multicenter trial examining the ability of an intensive lifestyle program or treatment with metformin to prevent or delay the development of type 2 diabetes in high-risk individuals with prediabetes. The DPP study showed that both interventions reduced the incidence of diabetes in participants, compared with placebo; the lifestyle intervention proved more effective than metformin in preventing the onset of diabetes. The Diabetes Prevention Program Outcomes Study (DPPOS) was the long-term follow-up of the original DPP study. The DPPOS sought to evaluate the effects of the interventions on the further development of diabetes and diabetes complications, including retinopathy, microangiopathy, and cardiovascular disease.

Archive files are organized into the following directories:

- Data
- Documents
- Dataset Integrity Check (DSIC)
- Forms

### **Data**

The DPPOS Data directory contains the following:

#### Data/DPP Bridge/Contents
