

DCCT Data Set Documentation: Monthly HbA1c values

Monthly HbA1c Values

Purpose: Hemoglobin A_{1c} (HbA1c) was the DCCT's principal measure of long-term glycemic control, and was used both to guide the management of individual patients in the intensive treatment group and to monitor and describe the glycemic separation between treatment groups throughout the course of the trial.

Collection Schedule: For intensively treated patients, baseline, each monthly clinic visit, and close-out; for conventionally treated patients, baseline, each quarterly visit, and close-out (with slight exceptions as noted below).

Data Set Name: HBAM

Structure: Longitudinal -- one record per patient, with sequentially numbered variables representing each possible month of follow-up from 000 (baseline) through 115, plus close-out.

Size: 1441 observations of 236 variables.

Known Anomalies: Data for certain patients may be missing during periods in which those patients were placed on temporary inactive status. Patients randomized to the intensive treatment group who temporarily deviated to conventional therapy may have provided only quarterly data during the period of deviation; likewise, conventionally treated patients who deviated to intensive treatment may have provided HbA1c samples on a monthly basis during that deviation. (The DCCT protocol mandated deviation from conventional to intensive therapy for women who became pregnant or were attempting to conceive, as well as for any patient whose HbA1c exceeded the upper safety limit of 13.11%.) Details of deviations and transfers to temporary inactive status, including dates of status changes and reasons for deviation, may be found in the patient-status data set (STATUS).

CONTENTS PROCEDURE

Data Set Name:	DCEXPOR.HBAM	Observations:	1441
