

DCCT Data Set Documentation: Form 106

Form 106: Details of Pregnancy and Outcome

Purpose: To collect detailed information on the course of pregnancy and neonatal outcome.

Collection Schedule: Reported in real time at the termination of each pregnancy.

Data Set Name: F106CMB3

Structure: One record per pregnancy.

Size: 273 observations of 148 variables.

Known Anomalies: Collection of pregnancy data on Form 106 was initiated in January 1991. Some retrospective reporting of earlier pregnancies was attempted, but complete data collection was not always possible in these cases. Form 106 was not completed for pregnancies that occurred early in the trial. However, some information on these pregnancies should be available from Form 20.
