

1. Overview

The Barretts Esophagus Data Archive contains an analysis dataset collected by the study, study forms, and documentation.

The archive is organized into the following directories:

- Data
- Documentation
- DSIC

The sections below describe the contents of each of these directories.

2. Data

This directory contains the study dataset in SAS (barretts_analysis_nihms345321.sas7bdat). The dataset contains data for 5,479 records with 146 variables.

3. Documentation

This directory contains documentation produced by the Coordinating Center. In particular, this directory contains the protocol, key definitions and classifications, forms, and a readme file regarding the SAS dataset (niddk-legend-cols.txt).

4. DSIC

This directory contains a report of the results of the integrity check carried out by the Data Repository for the Barretts Esophagus dataset archived in the repository.
