In ICU																		
BP - first daily (mmHg)																		
Max coma grade (0-IV)																		
Seizures																		
GI bleed																		
Cardiac arrhythmias																		
Acute renal failure																		
CXR abnormalities																		
Respirator																		
CVP line																		
PCWP																		
ICP monitor																		
Mannitol																		
Barbiturates																		
Other sedatives																		
Pressors																		
Lactulose																		
Acid suppressants																		
NAC (circle route or n/a)																		
External Liver support																		
Hemodialysis																		
Hemofiltration/CVVHD																		
Plasmapheresis																		
Transfused RBCs (cc)																		
FFP used (cc)																		
Platelets used (cc)																		
Factor VIIa																		
Steroids																		
Vitamin K																		
Antioxidant cocktail*																		
Other tmts																		
Comments																		
Plasma collected																		

\*circle components ordered and administered or n/a if none were ordered: D=desferrioxamine, L=liqui E, N=N-acetylcysteine, P=prostaglandins, S=selenium
