859	<p>[ps_desc]</p> <p>Show the field ONLY if: [ps_interest] = '1' or [ps_callbacksuccess] = '1'</p>	<p>Screeners: "Great, thank you. Now let me tell you a little about the study:" The Prevention of Lower Urinary Tract Symptoms (PLUS) Research Consortium is studying bladder health in different communities across the United States. There are many parts of the body involved in urination or "peeing" and the purpose of this study is to find the connections between the body and other influences to help keep bladder problems from happening.</p> <p>We developed a survey to measure women's bladder health. The purpose of the VIEW study is to make sure this survey works for all different women so that we can use the survey in future studies. If you are eligible to participate in the VIEW study, we will ask you to complete three different study activities. First, we will ask you to complete a 30-45 minute electronic or hardcopy survey about your bladder. Second, we will mail you records to keep at home, for example, we will ask you to record your bladder symptoms for two days and how much you pee every time you go to the bathroom for 24 hours. Lastly, we will schedule you to come to for an in-person evaluation that will last up to 2 hours for some simple tests. These tests will not cost you anything, they will not hurt, and there are no shots, X-rays, or anything uncomfortable with these tests. After we go through these eligibility questions I will describe the study activities in detail and answer any questions you may have.</p> <p>Time involved: SCREENER: For your participation in the different activities in this study, the survey, the home records and the office visit, you will be compensated for your time. If you are interested in learning more about this study, this phone call will last about 15 minutes.</p>	descriptive
